

Valued Residents,

We would like to inform you of upcoming improvements at the lift station site located north of Crossing Circle, with **construction beginning on May 11**.

This project will include the installation of emergency overflow vaults designed to provide additional protection for the local environment and nearby waterways, as well as the replacement of the existing lift station with a new, modern system. These upgrades will enhance the reliability and resilience of critical wastewater infrastructure in the area.

Construction is expected to continue throughout the summer months. During this time, you may notice increased construction traffic along Hidden Pointe Blvd. and a short portion of Crossing Circle. We encourage residents to use caution when traveling in these areas.

We apologize for the short notice. Due to a last-minute shift in contractor availability, the project schedule was moved up to begin sooner than originally planned.

We appreciate your patience and understanding as we complete these important improvements for the community.

Regards,

Nathan Travis

District Manager
